

The unit KX 213I is determined for connection of binary signal 48 V into input boards of system ZAT–2000 MP.

It contains 13 circuits with a resistor and a separation diode.

Maximal voltage between pins a – b of connector : 60 V

Consumption of one circuit
(at connection of input module DLI004)

– at 52 V DC : 7,0 mA,

– at 42 V DC : 5,4 mA

Weight : 0,15 kg

Dimension : 1 module URS
