

The board BB0019E1 represents the communication interface of system Z200 for Ethernet.

Its construction and circuit design allow the board to be safely inserted and removed from the live backplane (Hot Swap function.)

The board BB0019E1 works only with control board BB0001M2!

Electrical Parameters					
Parameter	Conditions	Min.	Stand.	Max.	Units
Number of communications channels			2		
Dielectric strength	Input / System	700			V DC
Power supply		21	24	26	V
Consumption				250	mA

- 2 channels 100BASE-TX
- Standart Ethernet interface according IEEE 802.3
- Displaying digital input states and correct function on the board front panel
